APO 500

10 April 1946

Chest, Infectious Anemia Diagnosis,
Veterinary, Field, Type 1939

SOURCE: Veterinary Department Headquarters Depot, Tachikawa, Japan.

IMPORTANCE: Not previously reported.

DESCRIPTION: This chest is made of reinforced fiber and measures 21" x 14" x 9". It has one metal handle on each end, two snap catches and locking hasp on the lid, and is very sturdily constructed. The inside is finished with heavy fabric. The chest is painted dark green with red veterinary insignia, and the black Japanese characters on the lid, literally translated, mean "Infectious Anemia Diagnosing Equipment".

On the underside of the lid is fastened an inventory of the proper contents. A translation is included in this report.

COMMENT: Equipment for diagnosing anthrax and glanders is included as a part of the basic equipment sets carried by large Japanese Army Veterinary field units, but this specialized set is issued in addition, to fill local needs. It is compact and suitable for dispatch with parties investigating epidemics of these diseases in the field.
